

New Eco Products Bio-based PA 56

New-generation eco-friendly products is achieved. With various processing techniques, the fabrics can possess excellent water repellent or waterproof breathable functionalities, making them a new option for outdoor sports lovers.

Bio-based PA 56 contains 45% of the alternative component of oil from non-edible food. By using bio-based material, these new bio-based nylon can reduce the usage of petroleum and cut down carbon emission. Moreover, bio-based material would not change the original characteristic of Nylon; this is a new generation of eco products.
